

WHAT IS CLAIMED IS:

*Part B3* > 1. Hybrid maize seed designated 39J26, representative seed of said hybrid 39J26 having been deposited under ATCC accession number \_\_\_\_\_.

*Part P1* 2. A maize plant, or its parts, produced by the seed of claim 1.

3. Pollen of the plant of claim 2.

4. An ovule of the plant of claim 2.

*Part B4* > 5. A tissue culture of regenerable cells of a hybrid maize plant 39J26, representative seed of said hybrid maize plant 39J26 having been deposited under ATCC accession number \_\_\_\_\_, wherein the tissue regenerates plants capable of expressing all the morphological and physiological characteristics of said hybrid maize plant 39J26.

6. A tissue culture according to claim 5, the cells or protoplasts being from a tissue selected from the group consisting of leaves, pollen, embryos, roots, root tips, anthers, silks, flowers, kernels, ears, cobs, husks, and stalks.

7. A maize plant, or its parts, regenerated from the tissue culture of claim 5 and capable of expressing all the morphological and physiological characteristics of hybrid maize plant 39J26, representative seed having been deposited under ATCC accession number \_\_\_\_\_.

8. The maize plant of claim 2 wherein said plant is male sterile.

9. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 2 as a source of said breeding material.

*Part B5* > 10. The maize plant breeding program of claim 9 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing,

pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

11. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 2, said maize plant capable of expressing a combination of at least two 39J26 traits selected from the group consisting of: a relative maturity of approximately 80 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, excellent silage yield potential, excellent grain yield potential, high energy content for whole plant silage, excellent seedling vigor, excellent starch content of the whole plant, early flowering, and particularly suited to the Pacific Northwestern region of the United States and bordering area of Canada and to Northern Europe.

12. A hybrid maize plant according to claim 2, wherein the genetic material of said plant contains one or more transgenes.

13. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 12 as a source of said breeding material.

*Mark B6* 14. The maize plant breeding program of claim 13 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

15. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 12, said maize plant capable of expressing a combination of at least two 39J26 traits selected from the group consisting of: a relative maturity of approximately 80 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, excellent silage yield potential, excellent grain yield potential, high energy content for whole plant silage, excellent seedling vigor, excellent starch content of the whole plant, early flowering, and particularly suited to the Pacific Northwestern region of the United States and bordering area of Canada and to Northern Europe.

B4  
16. A hybrid maize plant according to claim 2, wherein the genetic material of said plant contains one or more genes transferred by backcrossing.

D4  
17. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 16 as a source of said breeding material.

D4  
18. The maize plant breeding program of claim 17 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

19. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 16, said maize plant capable of expressing a combination of at least two 39J26 traits selected from the group consisting of: a relative maturity of approximately 80 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, excellent silage yield potential, excellent grain yield potential, high energy content for whole plant silage, excellent seedling vigor, excellent starch content of the whole plant, early flowering, and particularly suited to the Pacific Northwestern region of the United States and bordering area of Canada and to Northern Europe.

20. A maize plant, or its parts, having all the morphological and physiological characteristics of the plant of claim 2.

21. The maize plant of claim 20 wherein said maize plant is male sterile.

22. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 20 as a source of said breeding material.

D4  
23. The maize plant breeding program of claim 22 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing,

*Bad work.*

pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

*Bad work.*

24. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 20, said maize plant capable of expressing a combination of at least two 39J26 traits selected from the group consisting of: a relative maturity of approximately 80 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, excellent silage yield potential, excellent grain yield potential, high energy content for whole plant silage, excellent seedling vigor, excellent starch content of the whole plant, early flowering, and particularly suited to the Pacific Northwestern region of the United States and bordering area of Canada and to Northern Europe.
25. A hybrid maize plant according to claim 20, wherein the genetic material of said plant contains one or more transgenes.
26. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 25 as a source of said breeding material.
27. The maize plant breeding program of claim 26 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.
28. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 25, said maize plant capable of expressing a combination of at least two 39J26 traits selected from the group consisting of: a relative maturity of approximately 80 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, excellent silage yield potential, excellent grain yield potential, high energy content for whole plant silage, excellent seedling vigor, excellent starch content of the whole plant, early flowering, and particularly suited to the Pacific Northwestern region of the United States and bordering area of Canada and to Northern Europe.

*B 1*

*Claim 20*

*add b 2'*

29. A hybrid maize plant according to claim 20, wherein the genetic material of said plant contains one or more genes transferred by backcrossing.
30. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 29 as a source of said breeding material.
31. The maize plant breeding program of claim 30 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.
32. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 29, said maize plant capable of expressing a combination of at least two 39J26 traits selected from the group consisting of: a relative maturity of approximately 80 based on the Comparative Relative Maturity Rating System for harvest moisture of grain, excellent silage yield potential, excellent grain yield potential, high energy content for whole plant silage, excellent seedling vigor, excellent starch content of the whole plant, early flowering, and particularly suited to the Pacific Northwestern region of the United States and bordering area of Canada and to Northern Europe.
